An Important Community Partnership

The 2013 Community Health Needs Assessment (CHNA) was the result of a community partnership between various organizations and citizens that involved countless hours of work by many people. The idea behind the assessment was to find strengths and weaknesses in our local healthcare delivery system, identify areas for improvement, engage our community leaders, and facilitate the most essential changes. It is our goal to use the CHNA results to improve the health of all of us who are blessed to live in Stephens County.

Two areas that rose to the top were the promotion of healthy lifestyles and improvement of our countywide mental health system. The information that follows is intended to be informative and to serve as a call for personal improvement and accountability.

A few of the questions that we now need to ask include the following:

1. What can we do to improve our own health and the health of our community?
2. What gaps exist in our mental health system?
3. What can and should we do in Stephens County to develop this system?

We are pleased to have the valuable results of this assessment where by our Community Health Improvement Plan (CHIP) was developed. We encourage everyone living in Stephens County to help us develop solutions to improve the health of our friends and neighbors.

Please note that a consistent point of reference will be the Duncan Regional Hospital website and the Stephens County Health Department website for all Community Health Improvement information. A printable version of this document and any updates from the two committees can be found on both websites.

We hope you find this information valuable.

Sincerely,

Pathways to a Healthy Stephens County
Board of Directors
Mobilizing Action through Planning and Partnerships

Mobilizing for Action through Planning and Partnerships (MAPP) is a strategic approach to community health improvement. This tool helps communities improve health and quality of life through community-wide strategic planning. Using the MAPP process, communities seek to achieve optimal health by identifying and using their resources wisely by looking at their unique circumstances and needs while building effective community partnerships for strategic action.

The MAPP tool was developed by National Association of City and County Health Officials (NACCHO) in cooperation with the Public Health Practice Program Office, and the Centers for Disease Control and Prevention (CDC). A work group composed of local health officials, CDC representatives, community representatives, and academicians developed MAPP between 1997 and 2000. The vision for implementing MAPP is: "Communities achieving improved health and quality of life by mobilizing partnerships and taking strategic action."

The benefits of using the MAPP process, as identified by NACCHO, include:

- **Create a healthy community and a better quality of life.** The ultimate goal of MAPP is optimal community health—a community where residents are healthy, safe, and have a high quality of life. Here, a "healthy community" goes beyond physical health alone. According to the World Health Organization, "Health is a dynamic state of complete physical, mental, spiritual and social well-being and not merely the absence of disease or infirmity" (101st Session of the WHO Executive Board, Geneva, January 1998, Resolution EB101.R2). The Institute of Medicine echoes this definition and notes "health is a positive concept emphasizing social and personal resources as well as physical capabilities" (Improving Health in the Community, 1997, p. 41).

- **Increase the visibility of public health within the community.** Using a participatory process with high visibility and increased awareness of public health issues, we can gain a greater appreciation for the local and public health system as a whole.

- **Anticipate and manage change.** Community strategic planning better prepares local public health systems to anticipate, manage, and respond to changes in the environment.

- **Create a stronger public health infrastructure.** The diverse network of partners within the local public health system is strengthened through the implementation of MAPP. This leads to better coordination of services and resources, a higher appreciation and awareness among partners, and less duplication of services.

- **Engage the community and create community ownership for public health issues.** Through participation in the MAPP process, community residents gain a better awareness of the area in which they live and their own potential for improving their quality of life. Community-driven processes also lead to collective thinking and a sense of community ownership in initiatives, and, ultimately, may produce more innovative, effective, and sustainable solutions to complex problems. Community participation in the MAPP process may augment community involvement in other initiatives and/or have long-lasting effects on creating a stronger community.

The above description of MAPP was taken from the NACCHO website and can be found at: [http://www.naccho.org/topics/infrastructure](http://www.naccho.org/topics/infrastructure).
Our Unified Vision

Located in Southwest Oklahoma, Stephens County was formed in 1907 in tandem with Oklahoma’s official recognition as a state. It is named for politician John H. Stephens, who supported Oklahoma’s push for statehood. The centrally located town of Duncan was named the county seat.

Measuring 27 miles from north to south and 33 miles east to west, Stephens County encompasses 891 square miles of land. It lies along the historic Chisholm Trail where cattle were driven from ranches in Texas to railheads in Kansas during the late 19th century. Early on, Duncan prospered with cotton as a main crop. The oil industry quickly brought greater prosperity to Duncan during the 1920s. Stephens County’s oil fields became and remained Oklahoma’s highest-producing area until the 1980s.

Although rich in history and oil, Stephens County has not been rich in health. In recent years, local partners have identified a need for change. During the spring of 2012, the Stephens County Health Department and Duncan Regional Hospital collaboratively engaged community partners and advocates in an effort to assess the health of Stephens County through a comprehensive study.

To ensure county-wide representation and participation, a committee was formed of individuals who encompassed the diversity of Stephens County. The Pathways to a Healthy Stephens County Committee was comprised of business and industry, local government, coalitions, education, community and civic organizations, public health, health care and other entities working together. Committee members represented the communities of Bray, Central High, Comanche, Duncan, Empire City, Marlow and Velma. On March 19, 2013, the committee adopted a vision statement for Stephens County to reflect the true progress and personal accountability they hope residents and the county as a whole will embrace. This vision will steer future efforts to build richness in health.

In April 2013, Stephens County representatives met to identify strategic issues from the data compiled during the Community Health Status Assessment. Items were prioritized and ranked by community leaders, stakeholders, lay members, and the general public. Those in attendance embraced the vision to move Stephens County forward toward a healthier community.

**Stephens County Vision**

*A county where citizens are aware of and inspired to live a safe and healthy life while maximizing resources to provide and encourage a healthy Stephens County.*
Executive Summary

In response to concerns about the health of Stephens County, the Stephens County Health Department and Duncan Regional Hospital partnered to lead an initiative focused on understanding and improving local health. Using a process developed by NACCHO, the two organizations gained participation from local leaders, businesses, community organizations and residents. The resulting Stephens County Community Health Assessment provides a comprehensive look at local health issues and lays the foundation for further development of the Community Health Improvement Plan (CHIP).

The Stephens County Community Health Assessment encompasses four individual assessments: community themes and strengths; local public health system; visioning and forces of change; and community health status.

Through the assessment process, the following four areas were identified as priorities for health improvement initiatives:

1. Healthy Living
2. Mental Health
   - Substance Abuse/Use (sub-category)
3. Safety/Injury Prevention
4. Cancer

Community participation was vital throughout the assessment process. By developing a shared vision and creating dialogue about health concerns, citizens and local partners gained a sense of responsibility for the future of Stephens County.

It is the hope that the partnerships fostered by this process will continue to grow and thrive as the county moves toward the development, implementation, and evaluation of an improvement plan to create a place where residents are inspired to live a safe and healthy life.
Demographic and Socioeconomic Factors

Stephens County is a rural county with a population of 45,048 according to the 2010 Census. The county includes eight incorporated communities: Bray, Central High, Comanche, Duncan, Empire City, Loco, Marlow, and Velma. Duncan is the most populated city with 23,431 residents; the second most populated area is Marlow, a community of fewer than 5,000 residents. There are a total of 8 independent school districts and 1 dependent school district in Stephens County.

The 2010 population of Stephens County was predominantly Caucasian with a median age of 40.6 years old. Approximately one quarter of the county’s residents are under the age of 19 (26.4%) and 17.4% of residents are 65 or older.

The median household income (2006-2010 data) in Stephens County was $43,524, which is higher than the state median income of $42,979. An estimated 12.2% of the Stephens County population lives below the poverty level and 10.1% of households are headed by a female with no spouse. Of those households, 5.6% have children under the age of 18. According to the 2011 State of the State’s County Health Report, 12.2% of county residents had no health insurance.

The leading causes of death in the county includes heart disease, cancer and unintentional injuries. Contributing to those causes are high prevalence of smoking, drug abuse (prescription and non-prescription) and a high obesity rates across all ages. Stephens County’s poverty level across 13% among its citizens in 2013. Poverty is being considered as a potential contributing factor to some of the areas defined as our priority areas of concerns.

Energy and manufacturing jobs are the primary income sources for Stephens County residents. The six major employers in the county: Halliburton Inc., Duncan Regional Hospital, Walmart, Duncan Public Schools, Wilco Manufacturing and Family Dollar Services Inc. Distribution Center. All of these employers are located in Duncan with the exception of Wilco, which is located in Marlow. The average commute time for those who live in the county is 19.4 minutes. As of April 2013, the unemployment rate for Stephens County was 4.1%.

Data provided by the US Census Bureau 2013
Priority Area Elements

The priority elements identified through the Community Health Status Assessment were shared with the broader community to validate and prioritize areas of concern. A community meeting was held on April 11, 2013 to gain consensus from Stephens County residents on the assessment results and receive their input to rank the elements in order of importance and greatest need.

Local board of health members, school superintendents, Federal and State representatives, community members and participants from earlier assessments were invited to the community meeting. To create awareness and encourage widespread participation, press releases were also provided to the Duncan Banner and rural newspapers. A total of 43 community members attended the session.

During the meetings and data review, participants discussed at length the linkage between mental health and substance abuse issues. As a result of these discussions, substance abuse shifted from a separate element to become a sub-category of mental health.

The community selected healthy living and mental health as its top two prioritized areas of focus and kept both safety and injury prevention and cancer as secondary priorities in the community.

The MAPP process enabled partners to establish a systematic method to establish goals, objectives and action steps to improve the health and safety of Stephens County. Community partners gathered for regular monthly meetings where they determined the top four issues to address and set goals and strategies to accomplish success. These goals and strategies can be found under Objective and Strategies on pages 10-16.
Objective #1:
Decrease number of cardiovascular deaths in Stephens County from 285/100,000 to 280/100,000 by 2018.

Objective #2:
Increase level of physical activity amongst Stephens County residents from 32.8% to 36.7% by 2018.

Objective #3:
Decrease number of Stephens County residents with a Body Mass Index (BMI) ≥ 30 from 27.6% to 24% by 2018.

Objective #4:
Increase level of fruit and vegetable consumption amongst Stephens County residents from 16.1% to 20% by 2018.

Objective #5:
Adopt health in all policies component in one community in Stephens County by 2018.

Objectives

**Objective # 1:**
Increase overall satisfaction with mental health services and access in Stephens County.

**Objective # 2:**
Decrease number of suicides in Stephens County from 22.7/100,000 to 20/100,000 by 2018.

**Objective # 3:**
Decrease number of fatal prescription drug overdoses in Stephens County from 57 to 51 by 2018.

**Objective # 4:**
Increase access to methamphetamine treatment admissions from 60 to 70 by 2018.

**Objective # 5:**
Reduce the overall percentage of youth in 8th, 10th, and 12th grade who report alcohol use in the past 30 days by 2018.

**Objective # 6:**
Reduce the overall percentage of youth in 8th, 10th, and 12th grade who report marijuana lifetime use by 2018.

**Objective # 7:**
Reduce the overall percentage of youth in 8th, 10th, and 12th grade who report inhalant lifetime use by 2018.

**Objective # 8:**
Reduce percentage of adults who report tobacco use from 20% to 18% by 2018.

Looking to the Future

The Action Cycle involves continuing plans for interventions, implementing those plans and evaluating them. The board and committees of Pathways are currently working in the Action Cycle.

A great deal of progress has been made addressing the priority issues and a condensed version of these implementations is noted, under Accomplishments in 2014 on page 18.

Yet, more work needs to be done in many areas and evaluations are to be done on an annual basis with the first evaluation to be conducted in June 2015.

To maximize our limited county resources and increase our working partnerships across all organizations and demographics, the work plans will be reviewed and updated quarterly for each working committee. This information will then be presented to the board of directors and strategies will be updated accordingly to maximize our health and safety benefits to the community.

MAPPing Our Way to Good Health

MAPP has been and is an effective and manageable strategic planning process for improving community health and safety. Although Pathways facilitates the process, our communities’ ownership is the fundamental component of MAPP. Broad community participation is essential. Because the community’s strengths, needs and desires drive process, MAPP provides the framework for creating a truly community-driven initiative. The MAPP process brings our communities’ diverse interests together to collaboratively determine the most effective way to conduct public health activities. The public’s involvement leads to collective thinking and, ultimately results in effective, sustainable solutions to complex problems.

Throughout the MAPP process our public health system recognized their greatest assets were the people who are committed to the improvement of the health and safety of our communities. Although monetary resources to achieve goals and objectives are provided by the various participating organizations and grants, it is the individual’s investment of time and energy that moves each community forward toward reaching goals.

A Community Health Needs Assessment will be conducted every third year to help guide our unified community planning process. From each assessment, we will continue on with our plan or make adjustments as needed to facilitate our shared vision of “a county where citizens are aware of and inspired to live a safe and healthy life while maximizing resources to provide and encourage a healthy Stephens County”.

While our needs are great and our resources few, we will succeed in our vision with the perseverance and tenacity of those coming before us to settle this great land and this great community.
Accomplishments 2014

Pathways to a Health Stephens County Inc. has been very busy in the first year of full operations. The following are a list of the many things completed or started by Pathways over the course of Calendar Year 2014.

♦ January 2014—Mental Health committee formed and began working on mental health goals and services expansion.

♦ January 2014—Healthy Living committee appointed a sub-group to work on development of a Farmers Market in Stephens County.

♦ January 2014—Completed final paperwork submission for Community Health Improvement Organization designation in Oklahoma. Certification was awarded.

♦ February 2014—Completed Health in All Policies Community discussion with representatives from all 7 communities and multiple local and state agencies.

♦ March 2014—Development of a data scorecard was completed and will be presented to the Pathways Board quarterly to keep track of changes and where our emphasis should be moving forward.

♦ July 2014—Pathways Board of Directors, By-Laws, and Operational documents completed and approved.

♦ July 2014—Mental Health committee started Mental Health First Aid trainings in county.

♦ July 2014—VegUP advertising campaign started to promote higher levels of fruit and vegetable consumption across the county.

♦ August 2014—Pathways Articles of Incorporation filed and approved.

♦ August 2014—Development and presentation of the VegUP.org website was completed. With a few minor changes the design and layout was approved and will be live in September.

♦ August 2014—Pathways welcomed the 3D Substance Abuse Coalition as member of the Pathways structure. 3D Substance Abuse Coalition will be working within the Mental Health Committee continuing to address substance abuse issues in the county.

♦ October 2014—Submitted application for 501c3 designation.
